

Mathematics Addition Calculations Policy 2022- 2023

'Working together to achieve success'

	Concrete	Pictorial	Abstract
Reception Addition			
Counting all method	<p>Children will begin to develop their ability to add by using practical equipment to count out the correct amount for each number in the calculation and then combine them to find the total. For example, when calculating $4 + 2$, they are encouraged to count out four counters and count out two counters.</p>  <p>To find how many altogether, touch and drag them into a line one at a time whilst counting.</p> 	<p>Children will learn that when we ask how many are there altogether they need to count continuously from one part to the next part, counting all the objects/pictures</p>  	<p>Being able to respond to questions like: How many would 3 and 2 be altogether? What are the number pairs for 5? (without concrete or Pictorial aids)</p>
Counting on method	<p>To support children in moving from a counting all strategy to one involving counting on, children should still have two groups of objects but one should be covered so that it cannot be counted. For example, when calculating $4 + 2$, count out the two groups of counters as before.</p> 	<p>Looking at pictures where they can use subitising and asking how many altogether?</p>	<p>Using a number line to count on – often we do this when calculating the class Team Points e.g. Green Team have 6 points and now 2 more need to be added. How many do they have now?</p> 

then cover up the larger group with a cloth.

For most children, it is beneficial to place the digit card on top of the cloth to remind the children of the number of counters underneath. They can then start their count at 4, and touch count 5 and 6 in the same way as before, rather than having to count all of the counters separately as before.

Children begin to learn to count on from the larger amount.

2...3

Year 1 Addition

Combining two parts to make a whole: part-whole model

Use cubes to add two numbers together as a group or in a bar.

Use pictures to add two numbers together as a group or in a bar.

$$4 + 3 = 7$$

$$10 = 6 + 4$$

Use the part-part whole diagram as shown above to move into the abstract.

Starting at the bigger number and counting on

$$11 + 5 = 16$$

11 cubes are lined up (1 ten and 1 unit/one). 5 cubes are added to the line of 11 giving a total of 16.

Start with the larger number on the bead string and then count on to the smaller number 1 by 1 to find the answer.

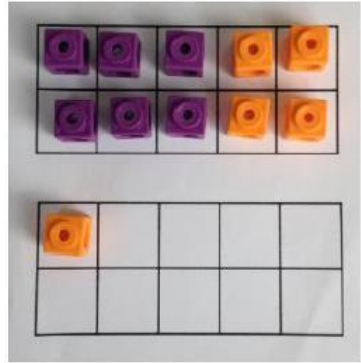

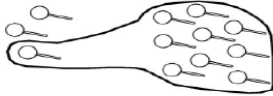

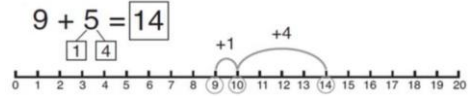

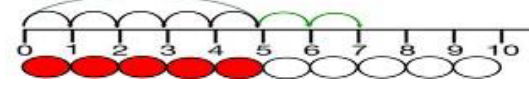

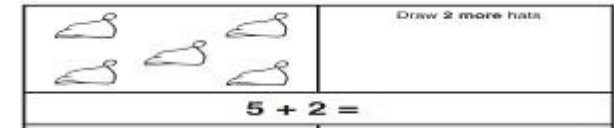

$$12 + 5 = 17$$

Start at the larger number on the number line and count on in ones or in one jump to find the answer.

$$12 + 5 = 17$$

Put the larger number in your head and count on the smaller number to find your answer.

<p>Regrouping to make 10.</p> <p>(This is essential skill for column addition)</p>	 <p>$6 + 5 = 11$</p> <p>Start with the bigger number and use the smaller number to make 10.</p>  <p>Base 10 also used.</p>	 <p>$3 + 9 =$</p> <p>Use pictures or a number line. Regroup or partition the smaller number to make 10.</p> 	<p>$7 + 4 = 11$</p> <p>If I am at seven, how many more do I need to make 10. How many more do I add on now?</p> $\begin{array}{r} 7 + 4 = 10 \\ / \quad \backslash \\ 3 \quad 1 \end{array}$ <p>$7 + 3 = 10$ $10 + 1 = 11$</p>
<p>Represent & use number bonds and related subtraction facts within 20</p>	 <p>2 more than 5.</p>	  <p>$5 + 2 =$</p>	<p>Emphasis should be on the language '1 more than 5 is equal to 6.' '2 more than 5 is 7.' '8 is 3 more than 5.'</p>
<p>Year 2 Addition</p>			
<p>Adding multiples of ten</p>	<p>$30 + 20 = 50$</p>  <p>Model using base 10 and numberline beads</p>	 <p>3 tens + 5 tens = _____ tens</p> <p>$30 + 50 =$ _____</p>	<p>$20 + 30 = 50$ $70 = 50 + 20$ $40 + \square = 60$</p>

Use representations for base 10

Use known number facts

Part, Part whole

Children explore ways of making numbers within 20

$$\square + 1 = 16 \quad 16 - 1 = \square$$

$$1 + \square = 16 \quad 16 - \square = 1$$

If $3 + 6 = 9$, then we also know that:

$$\underline{\quad} + \underline{\quad} = 9$$

$$\underline{\quad} - 3 = \underline{\quad} 6$$

$$\underline{\quad} - 6 = \underline{\quad} 3$$

“When we have a total and take away a part, then we are left with the other part”.

Using known facts

$$6 + 3 = 9 \quad 3 + 4 = 7$$

$$6 + 13 = 19$$

If $4 + 5 = 9$ leads to

Then $30 + 40 = 70$

$$14 + 5 = 19$$

leads to

$$300 + 400 = 700$$

Bar Model

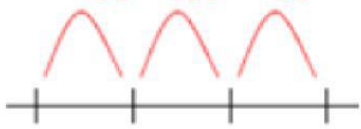

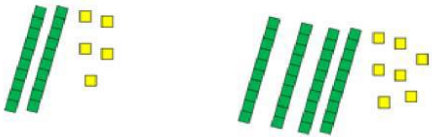

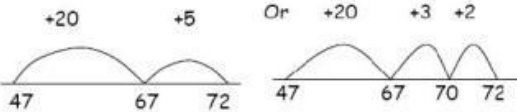

$$3 + 4 = 7$$

$$7 + 3 = 10$$

23	25
?	

<p>Add a 2-digit number and tens</p>	 <p>$25 + 10 = 35$ Explore that the ones digit does not change</p>	<p>$27 + 30$</p> <p><i>+10 +10 +10</i></p>  <p>27 37 47 57</p>	<p>$27 + 10 = 37$ $27 + 20 = 47$ $27 + \square = 57$</p>
<p>Add two 2-digit numbers</p>	 <p>Model using dienes , straws, place value counters and numicon</p>	 <p>Use number line and bridge ten using part whole if necessary.</p>	<p>$25 + 47$</p> <p>$20 + 5 \quad 40 + 7$</p> <p>$20 + 40 = 60$ $5 + 7 = 12$ $60 + 12 = 72$</p>

Year 3 Addition

Addition using exchanging

Children continue to use the Base 10 equipment to support their calculations, including exchanging 10 units/ones for 1 ten when the total of the units/ones is 10 or more. They will record their own drawings of the Base 10 equipment, using lines for 10 rods and dots for the unit blocks.

$$34 + 23 = ?$$

The units/ones are added first $4 + 3 = 7$
The tens are added next

$$30 + 20 = 50$$

Both answers are put together $50 + 7 = 57$

$$28 + 36 = ?$$

The units/ones are added first
 $8 + 6 = 14$ with ten units/ones exchanged for 1 ten.

A ring is put around the units/ones not exchanged – this is the units part of the answer. The tens are then added, including the exchanged ten, to complete the sum.

Children can draw the rods and dots or place value counters to represent the calculation.

Add two or three 2- or 3-digit numbers

Add together the ones first then add the tens. Use the Base 10 blocks first before moving onto place value counters.

$$28 + 36 =$$

Calculations

$$21 + 42 =$$

$$\begin{array}{r} 21 \\ + 42 \\ \hline \end{array}$$

$$\begin{array}{r} 223 \\ + 114 \\ \hline 337 \end{array}$$

Column method-regrouping

Make both numbers on a place value grid.

Add up the units and exchange 10 ones for one 10.

Add up the rest of the columns, exchanging the 10 counters from one column for the next place value column until every column has been added.

Children can draw a pictorial representation of the columns and place value counters to further support their learning and understanding.

Children could also draw base 10 rods and dots.

Start by partitioning the numbers before moving on to clearly show the exchange below the addition.

$$\begin{array}{r} 20 + 5 \\ 40 + 8 \\ \hline 60 + 13 = 73 \end{array}$$

Written method

Step 1	Step 2	Step 3
T U	T U	T U
6 5	6 5	6 5
+ 2 7	+ 2 7	+ 2 7
<hr/>	<hr/>	<hr/>
	2	9 2

This can also be done with Base 10 to help children clearly see that 10 ones equal 1 ten and 10 tens equal 100.
As children move on to decimals, money and decimal place value counters can be used to support learning.

$$\begin{array}{r} 321 \\ + 7 \\ + 48 \\ \hline 376 \\ 1 \end{array}$$

Year 4 Addition

Add numbers up to 4 digits and decimals with one decimal place

Children will move to year 4 using whichever method they were using as they transitioned from year 3.

Draw representations

Step 1

H	T	U
□ □	////	•••
□		
□ □	////	•••
□		

$$\begin{array}{r} \text{H T U} \\ 365 \\ + 247 \\ \hline \end{array}$$

Step 2
